Bon Voyage Collage Card

Create a fun and easy collage card with Stencil Shop software and vintage clip art!

Materials:

- Stencil Shop software by Carving Technologies
- PC and printer
- White cardstock
- Black cardstock
- Paper trimmer
- Oval Cutter
- Doublestick Tape

Instructions:

1. Open the Stencil Shop software using the "Create New Stencil" option.
2. Name your project and make the size 550 pixels wide by 425 pixels high, then select OK. A blank canvas will appear in a new window.
3. Select Stencil>Import Image, then type in the file name of the clip art that will be used. Make sure the Import As Is button is on, then click on Finish.
4. Once the image has been imported, select Stencil>Resize>Layer. This will open a new dialogue box. Enter the size you'd like the image to be in either pixels or inches. Make sure the "Maintain H/W ratio" box is checked, then click on OK.
5. Use the Move tool to place the image in the desired location on the canvas.
6. Continue to import images in this manner until the canvas is to your liking.
7. Save the file, then print it out onto white cardstock and trim to size with a paper trimmer.
8. Use doublestick tape to mount it onto a slightly larger card base made of black cardstock.
9. Print "Bon Voyage" onto another piece of white cardstock using your word processing software, then cut into a oval using the oval cutter. Cut a slightly larger oval out of black cardstock, then adhere both ovals to the front of the card using doublestick tape.
